EAD 260007-00-0301

February 2016

TYPE I ADDITION FOR CONCRETE, MORTAR, AND SCREED MATERIALS
- AQUEOUS SOLUTION -
The reference title and language for this EAD is English. The applicable rules of copyright refer to the document elaborated in and published by EOTA.

This European Assessment Document (EAD) has been developed taking into account up-to-date technical and scientific knowledge at the time of issue and is published in accordance with the relevant provisions of Regulation (EU) No 305/2011 as a basis for the preparation and issuing of European Technical Assessments (ETA).

1 SCOPE OF THE EAD

1.1 Description of the construction product

The Type I addition is an aqueous solution and free of particulate and except a dye free of organic matter.

NOTE The dye serves to colour the Type I addition and not concrete, mortar, or screed material.

According to EN 206 ¹ a Type I addition is a “nearly inert addition” for concrete. The product is not covered by a harmonised European standard (hEN).

Concerning product packaging, transport, storage, maintenance, replacement and repair it is the responsibility of the manufacturer to undertake the appropriate measures and to advise his clients on the transport, storage, maintenance, replacement and repair of the product as he considers necessary.

It is assumed that the product will be installed according to the manufacturer’s instructions or (in absence of such instructions) according to the usual practice of the building professionals.

Relevant manufacturer’s stipulations having influence on the performance of the product covered by this European Assessment Document shall be considered for the determination of the performance and detailed in the ETA.

1.2 Information on the intended use of the construction product

The Type I addition is intended to be used in concrete, mortar, and screed material.

1.3 Specific terms used in this EAD

2.2 Methods and criteria for assessing the performance of the product in relation to essential characteristics of the product

2.2.1 Harmful content – Colour

Colour is determined according to EN 1008, clause 6.1.1.

2.2.2 Harmful content – Suspended matter

Suspended matter is determined according to EN 1008, clause 6.1.1.
2.2.3 **Harmful content – Odour**

Odour is determined according to EN 1008, clause 6.1.1.

2.2.4 **PH-value**

PH-value is determined according to ISO 4316.

2.2.5 **Chlorides**

Chlorides are determined according to EN 196-2.

2.2.6 **Sulphates**

Sulphates are determined according to EN 196-2.

2.2.7 **Lead**

Lead is determined according to EN ISO 17294-2.

2.2.8 **Zinc**

Zinc is determined according to EN ISO 17294-2.

2.2.9 **Equivalent Na$_2$O content**

Equivalent Na$_2$O content is determined according to EN 196-2.

2.2.10 **Total carbon**

Total carbon is determined according to EN 1484.

2.2.11 **Setting time**

Setting time is determined on cementitious and calcium sulfate binder according to

- EN 196-3 where the mix is composed of a cement CEM II/A-M (S-L) 42,5 N according to EN 197-1 and
- EN 13454-2, clause 4.3, where the mix is composed of a calcium sulfate binder CAB – 30 according to EN 13454-1.

For both binders, one mix is made

- with de-ionised water and
- a second mix

- with de-ionised water, where 3 g of water is replaced by the Type I addition. The amount of 3 g refers to the mix specified in EN 196-3.

Type I addition, de-ionised water, cement, and calcium sulfate binder are taken from the same quantities to prepare the four mixes.

Further specimen preparation and testing is according to EN 196-3 and EN 13454-2.

According to EN 12878, clause 4.1.2.1, initial setting time obtained on specimens made with the Type I addition shall not differ by more than 60 minutes from the initial setting time obtained on specimens made with de-ionised water. Final setting time shall according to EN 12878, clause 4.1.2.2, not differ by more than 120 minutes from the final setting time obtained on specimens made with de-ionised water.
2.2.12 Compressive strength

Compressive strength is determined on cementitious and calcium sulfate binder according to
- EN 196-1 where the mortar prisms are composed of a cement CEM II/A-M (S-L) 42.5 N according to EN 197-1 and
- EN 13454-2, clause 4.4, where the mortar prisms are composed of a calcium sulfate binder CAB – 30 according to EN 13454-1.

For both binders, one set of three prisms is made
- with de-ionised water and
a second set of three prisms
- with de-ionised water, where 3 g of water is replaced by the Type I addition. The amount of 3 g refers to the mix specified in EN 196-1.

Type I addition, de-ionised water, cement and calcium sulfate binder are taken from the same quantities to prepare the four sets of prisms.

Further specimen preparation and testing is according to EN 196-1 and EN 13454-2. After 7 days all specimens are tested for compressive strength according to EN 196-1 and EN 13454-2. With the mean compressive strengths of the four sets of prisms, i.e. $R_{c,1}^{\text{mean}}$, $R_{c,2}^{\text{mean}}$, $R_{s,1}^{\text{mean}}$, and $R_{s,2}^{\text{mean}}$, the ratios

\[
\begin{align*}
    f_c &= \frac{R_{c,2}^{\text{mean}}}{R_{c,1}^{\text{mean}}} \\
    f_s &= \frac{R_{s,2}^{\text{mean}}}{R_{s,1}^{\text{mean}}}
\end{align*}
\]

are calculated. Where:
- $R_{c,1}^{\text{mean}}$ Mean compressive strength of prisms with cement and de-ionised water
- $R_{c,2}^{\text{mean}}$ Mean compressive strength of prisms with cement and Type I addition and de-ionised water
- $R_{s,1}^{\text{mean}}$ Mean compressive strength of prisms with calcium sulfate binder and de-ionised water
- $R_{s,2}^{\text{mean}}$ Mean compressive strength of prisms with calcium sulfate binder and Type I addition and de-ionised water
- $f_c$ Prisms with cement, ratio of mean compressive strength with and without Type I addition
- $f_s$ Prisms with calcium sulfate binder, ratio of mean compressive strength with and without Type I addition

According to EN 12620, clause 6.4.1, the ratios shall be $f_c \geq 0.80$ and $f_s \geq 0.80$. 
3 ASSESSMENT AND VERIFICATION OF CONSTANCY OF PERFORMANCE

3.1 System of assessment and verification of constancy of performance to be applied

For the product covered by the EAD the applicable European legal act is: Decision 1999/469/EC
The system is: 2+

3.2 Tasks of the manufacturer

The cornerstones of the actions to be undertaken by the manufacturer of the Type I addition for concrete, mortar and screed materials – Aqueous solution in the procedure of assessment and verification of constancy of performance are laid down in Table 2.

Table 2: Control plan for the manufacturer – Cornerstones
