

Action Plan for Speeding up the Citation of EADs in the OJEU

05/12/2022

Background

Under the Construction Products Regulation (CPR), the number of European Technical Assessment (ETA)/European Assessment Document (EAD) requests grew significantly in 2018 and 2019. This growth can be explained from a market perspective by the full implementation of the CPR and the fact that the ETA/EAD route for CE-marking supports innovative construction products. The standstill of the standardization route in the construction products sector might also have contributed to this growth.

From a legal perspective, the change of the former regulatory regime (Construction Products Directive) to the new one (Construction Products Regulation) made manufacturers switch from European Technical Approvals to European Technical Assessments based on EADs. Eventually, the James Elliott court case (C-613/14) obliged the DG GROW services and EOTA to adapt to the new legal requirements and ensure that EADs, as harmonized technical specifications, comply with the legal and technical requirements under the Construction Products Regulation. In this context, the EADs which had not been developed and adopted in line with these new requirements were prevented from being cited in the Official Journal of the EU (OJEU). This was especially the case for all EADs which were developed and adopted without fully considering the revised guidelines for the drafting of EADs (Guidelines for the Application of the EAD Format, document AG013-05.2 from July 2019, implementing technical and legal requirements following from the James Elliot court case). All these EADs thus had to be returned to EOTA for further revision and amendment, in order to fulfill the necessary requirements for the citation in the OJEU.

The temporary standstill caused by the James Elliott judgment and the number of EADs to be re-assessed and amended before being proposed for citation in the OJEU started to create a backlog that has not been possible to clear so far. Among the reasons were the increased efforts needed in EOTA for aligning EADs with the legal and technical requirements under the CPR, which sometimes became relevant for EADs which had not yet been cited but already adopted by EOTA and used for the issuing of ETAs, as well as the increased efforts needed at the DG GROW side to re-assess the EADs after their amendment.

At present, the procedure for handling EAD review and citation is based on an agreement reached between EOTA and the DG GROW services in March 2021. It essentially provides for successive groups of four EADs to be first reviewed and as necessary amended in EOTA, and only then sent to the DG GROW services for verification and subsequent citation. This process may involve several iterations since additional adjustments to an EAD might be required following the DG GROW services assessment, after which the EAD is sent to DG GROW again.

While the scheme has effectively increased the number of EAD citations, it has not reduced the backlog of EADs, due to increasing number of new EADs to be appropriately developed, assessed and potentially amended before their citation in the OJEU. The DG GROW has therefore requested EOTA to propose an Action Plan to speed up the citation of EADs and clear the backlog in a short and ambitious timeframe.

Objective of the Action Plan

The objective of the present Action Plan is to **clear the backlog of EADs to be assessed and amended before being proposed for citation in the OJEU (considering a list of 137 EADs counted in July 2022 – see Annex 1) until the end of July 2023 (9 months-Scenario)**, i.e., to get as many of those EADs as possible greenlighted for citation by the DG GROW services and eventually cited in the OJEU.

This objective must be achieved while not compromising the legal and technical quality of the EADs given that they become harmonised technical specifications with their citation in the OJEU.

This Action Plan relates only to the EADs being part of the backlog as of July 2022. It has to be taken into account that while proceeding with this Action Plan, further EADs, which either have been developed in the meantime or will have to be developed following new ETA/EAD requests, will need to be assessed and potentially amended before their citation in the OJEU, consuming resources both on the side of EOTA and TABs as well as on the side of the DG GROW.

Prerequisites for successful implementation

For the Action Plan to be successful, EOTA and the DG GROW need to commit to the following conditions and principles:

- EOTA internal quality management Project Team (PT16) and TABs will revise the legal and technical content of at least four EADs per week for the DG GROW services assessment.
- The legal and technical requirements for the development of EADs as detailed in the Guidelines for the Application of the EAD Format (document AG016-06.1 from August 2021) will not change during this period. This is under the condition that there will be no Court rulings or other decisions having an impact on the content of the harmonised technical specifications in general, or EADs in particular.
- Needed resources in DG GROW, EOTA and TABs are made available.
- The EC annual EOTA Grant and the comprised EOTA reimbursement schedule will be adjusted to reflect the accelerated rhythm of revision and citation aimed for in 2022 and 2023.
- The following legal and technical quality criteria under the Construction Products Regulation (CPR) will be respected in the EAD revision:
 1. Full compliance with the CPR and the Guidelines for the application of the EAD format issued for its implementation.
 2. Coherence of the internal market. EADs must fit within the existing harmonised technical specifications for similar products. Internal market must provide for a level playing field for all manufacturers concerned.
 3. Legal certainty. All EADs must respect the CPR with its requirements and performance orientation. In particular, the "older" EADs currently in the backlog must be revised by keeping this in mind.
 4. Technical accuracy. EADs must provide for robust and explicit technical content. They have to adhere to the principles of reproducibility, repeatability and comparability. This contributes to both the functioning of the internal market and to the legal certainty.

Proposed procedure for the Action Plan

1. **Roadmap:** The pending EADs subject to this Plan are listed in Annex 1.
2. **Steering of work:** The EOTA Secretariat and the DG GROW services will meet in the first week of each month to organise/agree upon procedural issues for the upcoming EADs to be revised by EOTA by the end of the month.

3. **Substantial amendment of EADs:** Many of the pending EADs were originally adopted and submitted to DG GROW services assessment in view of possible citation prior to 2020, i.e. without fully considering the revised Guidelines for the Application of the EAD Format. This means that substantial amendments will be needed to adapt them to the current EAD format and ensure that they fulfil the legal and technical requirements for citation in the OJEU (effort estimated at 2 person-days per EAD). EADs are formally and technically revised by the expert of the responsible TAB.
4. **PT 16 quality control:** Before being sent to the DG GROW services for assessment and subsequent citation, EADs will continue to undergo an EOTA-internal review by PT 16 to adjust them to the legal and technical requirements under the CPR and streamline and reduce the efforts and observations needed at DG GROW level. In order to keep up with the increased number of EADs to be revised, PT 16 would have to be strengthened by at least one additional member.
5. **EOTA makes available at least 4 revised EADs per week:** EOTA will make available at least four revised EADs for the DG GROW services assessment each week.
6. **Assessment and observations from the DG GROW services:** The DG GROW services will present their assessment and observations on the EADs received, within 10 working days after the receipt of each individual EAD. A back and forth process may be necessary to clarify these observations, but no additional observations or requests to parts of the EAD which have already been assessed should be introduced at this or any later stage.
7. **Reaction to DG GROW observations:** EOTA will ensure a swift reaction to DG GROW observations, within 5 working days after their receipt, and will amend the EADs accordingly and send them to the DG GROW services for greenlight. Where this deadline cannot be met, EOTA will send the EAD to the DG GROW services greenlight as soon as possible, but the DG GROW services will prioritize the assessment of the new batches of revised EADs made available by EOTA each week (point 5).
8. **Greenlight and citation:** For the EADs greenlighted for citation, EOTA will send to DG GROW a copy of the final EAD, together with a translation of its title in all the official languages of the EU, for citation of its reference in the OJEU. The DG GROW services will publish the references of those EADs in the OJEU promptly and as soon as possible. For the EADs that ultimately can not be greenlighted for citation, the DG GROW services will send a formal letter to EOTA, indicating the reasons why the reference of a specific EAD cannot be cited in the OJEU.

Technical details of EAD exchanges will be developed in collaboration between the DG GROW services and EOTA (e.g., continuing the current email based exchanges or using a shared folder or Microsoft Teams to ease the process of exchanges, while at the same time guaranteeing their traceability).

Risk Assessment

Risk	Likelihood	Impact	Mitigating actions
Changes regarding the formal requirements for EADs	2	3-5 ¹	Develop a new EAD Guideline (Effective communication of "new requirements" to TABs.)
Departure of relevant experts in the EOTA secretariat	2	4	Start a selection process
Departure of relevant experts in TABs	3	3	Start a selection process/Transfer the EAD to another TAB that has been involved in the Working Group developing the EAD
Departure of relevant experts in DG GROW Services	2	4	Start a selection process
Work overload in TABs due to other reasons	3	3	Re-organisation of TAB experts
Grant funding not received	1	4	Amendment of the EAD reimbursement criteria

¹ Depending on the necessary action with regard to redrafting EADs

Annexes:

1. EADs pending for revision and citation before 2022-07-15
2. Clustering of technically related pending EADs
3. Flowchart – EAD backlog action plan
4. EAD backlog Gantt chart
